

CA10 / CAD11 / CAD12

Kraus & Naimer's highly compact CAD-Type cam switches are used in a wide range of electrical and electronic applications. They are particularly suitable for semiconductor circuits and can be also used for relay and contactor control. They meet all requirements for controls switches in conventional systems.

CAD Type Cam switches incorporate corrosion resistant contacts which permit operation on system voltages as low as 1 Volt.

Enclosed stages provide excellent protection against dust and other contaminants.

Two Contact Systems

- (1) Self-cleaning H-Bridges with a cross-wire contact system are used for electronic and low voltage range applications.
- (2) A rigid double break bridge with Silver alloy contacts provides high making and breaking capabilities for regular control applications.
